

Mandatory tuberculosis (TB) examination

Estimated TB incidence rates, 2016

Do you come from one of these countries and plan to stay in Norway for more than 3 months?

According to Norwegian law, tuberculosis examination is mandatory for persons from countries where tuberculosis is common.

The examination consists of a chest x-ray for adults and a blood test for children. It is also important that persons without legal residency in Norway are examined for tuberculosis. Test results that indicate tuberculosis infection will not have negative consequences for work or resident permit applications. All information is handled with confidentiality.

Afghanistan	Fiji	Kasakhstan	Namibia	Somalia
